## SUMMARY

Full Stack Web Developer with prior experience in testing. A creative, passionate team player and web developer who can collaborate with other team members to accomplish the project goals. Known for accountability, dedication, and commitment to meet deadlines, and uneffaced when challenged with complex problems.

## TECHNICAL SKILLS

**Frontend:** HTML, CSS, JQuery, JavaScript, Bootstrap, Handlebars, React, AJAX
**Backend:** MySQL, MongoDB, Express, Node, MVC
**Testing Tools**: Chrome Developer Tools, JMeter, Selenium, JUnit, SOAPUI
**Certifications:** ISTQB CTFL certified tester

## RECENT PROJECTS

### The Fight Club
github.com/AtimaB/The-Fight-Club  | the-fight-club.herokuapp.com/
- Full stack fighting game app with support for two players with real-time score tracking, and result display. Lead a three member team to create the full application while helping the team to resolve critical backend issues in Sequelize.
- Technologies Used: Node, Express, Socket.io, Handlebars, Sequelize

### Employee Directory
github.com/YakiniA/19-React-EmployeeDirectory  | yakinia.github.io/19-React-EmployeeDirectory/
- The application is based on creating an employee directory with React. The user can view the entire employee directory at once and can filter the employees based on name, email and phone.
- Technologies Used: React

### Shifty Planner
github.com/Eelektrick/Shifty-Planner | shifty-planner.herokuapp.com/
- Shift management and timekeeping system with a focus on the needs of first responders. As an employee, it lets the user select the shift to trade. Once trade is done, it will be notified by email. The other users can either `Propose/Reject`. The same will be notified and at last swapping of shifts being done.
- Technologies Used : React, Express, Node, MongoDB

## RELEVANT EXPERIENCE

**FRUGAL TESTING INC**                                                                                          **Remote**
*Performance Test Engineer*                                                                              *2019 - 2020*
     **Performance Projects**: Money On Mobile, Learnwise, CRC, Impuesto
Collaborated with the team to solve complex JMeter correlation, and scripting challenges to deliver critical load testing projects on-time. Successfully uncovered five critical load testing defects by analyzing data in NewRelic, Loggly and other monitoring tools. Delivered meaningful load testing reports to the customer providing actionable insights into the application performance.

     **Manual Testing Projects:** Middle East Corporate, Zoom
Improved the quality of the application by testing, verifying and validating the functionality and user stories across a broad variety of devices, operating systems, browsers, and platforms. Increased the test coverage of the applications through creative test design and exploratory testing and reduced the production lead of functional defects for every release.

**COGNIZANT TECHNOLOGY SOLUTIONS** **Chennai, India**
*Programmer Analyst* *2011 - 2013*
Developed both Customer and Merchant applications using Java. Improved the unit test coverage of the existing Java application by applying various test design techniques such as boundary value analysis, decision table, and state transition. Executed system level tests using Rest Client and SOAPUI. Executing and reporting done after the test run.

## ADDITIONAL EXPERIENCE

**FOUNDER** *2014 - 2018*
Worked on opening an ECommerce store to sell party supply items online. Also involved in performing SEO to boost up the sales and did promotion on social media sites including facebook, pinterest.
